Field Creation and Data Type Configuration

School IT Ticket Table - Explained

Description

The objective of this milestone activity is to create all required fields in the School IT Ticket table with the correct data types, choices, and dependencies, ensuring structured and consistent data capture. Each field is given a suitable type (such as Auto Number, Reference, Choice or String), and the Choice fields are then loaded with their values using the Form Designer.

Point	Explanation
Objective	Create every required field with the right data type and choice values.
Table	School IT Ticket table (created in Activity 1).
Tool used	Form Designer, to add fields and choice values on the form.
Outcome	Structured and consistent data capture for every ticket.

Fields and Data Types

Field Label	Type	Reference / Choice	Explanation
Number	Auto Number	-	Unique ticket ID generated automatically for each ticket.
Caller	Reference	sys_user	Links the ticket to the user who raised it.
Category	Choice	Network, Hardware, Access, Performance	Broad area of the issue, picked from a fixed list.
Subcategory	Choice	Wi-Fi, Projector, Forgot Password, Slow Computer	Specific issue. Depends on the Category (dependency is set in Activity 3).
Short Description	String	-	One-line summary of the issue.
Description	String	-	Detailed description of the issue.
State	Choice	New, In progress, On hold, Resolved, Closed	Shows the current stage of the ticket.
Assigned Group	Reference	sys_user_group	Support group responsible for the ticket.
Assigned to	Reference	sys_user	Individual agent working on the ticket.

Data Types Explained

Type	Meaning	Fields using it
Auto Number	System generates a unique, sequential number.	Number

Type	Meaning	Fields using it
Reference	Points to a record in another table, so users are selected instead of typed. sys_user is the User table and sys_user_group is the Group table.	Caller, Assigned Group, Assigned to
Choice	Dropdown list with predefined values, which keeps data consistent.	Category, Subcategory, State
String	Plain text entered by the user.	Short Description, Description

Steps to Configure Choice Fields

Step	Action	Explanation
1	Create all fields with their appropriate type.	Add each field in the table with the type shown in the fields table.
2	Add the choices from the Form Designer.	Open the form in Form Designer and select the Choice field to open its properties.
3	Add values to Category.	Add Network, Hardware, Access and Performance.
4	Add values to Subcategory.	Add Wi-Fi, Projector, Forgot Password and Slow Computer.
5	Add values to State.	Same way, add New, In progress, On hold, Resolved and Closed.
6	Click Save (top right corner).	Saves all the field and choice changes.
7	Open the form and reload it.	Confirms the fields and choice lists appear correctly on the form.

Choice Values Summary

Choice Field	Values to add	Number of values
Category	Network, Hardware, Access, Performance	4
Subcategory	Wi-Fi, Projector, Forgot Password, Slow Computer	4
State	New, In progress, On hold, Resolved, Closed	5

Key Points to Remember

Point	Why it matters
Create fields before adding choices	Choice values can be added only after the field exists with the Choice type.
Only Category, Subcategory and State are Choice fields	All three need their values added through the Form Designer.

Point	Why it matters
Save, then reload the form	Reloading confirms the changes were applied.
Keep the update set as Current	The created update set appears as Current, so all these changes are captured in it.
