Update Set Creation in ServiceNow

Navigation Steps - Explained

Description

An Update Set in ServiceNow is a container that tracks the configuration changes you make (such as tables, fields, business rules, flows and forms). These changes can then be moved from one instance to another, for example from Development to Test or Production. Creating a dedicated update set for the project and making it your current set ensures that all your changes are captured in one place and nothing is missed.

Point	Explanation
Purpose	Capture and track all project configuration changes in one container.
Used for	Moving changes between instances (Dev, Test, Prod).
Update set name	Project Update Set
Scope	Global

Navigation Steps

Step	Action	Explanation	Result
1	Go to All menus and search for **Update Set**.	Open the All menu in the left navigation panel and type Update Set in the filter box.	Update Set options are listed.
2	Under **System Update Sets**, select **Local Update Sets**.	Local Update Sets shows the update sets that exist on this instance.	The list of local update sets opens.
3	Click the **New** button (top right corner).	Starts the creation of a new update set.	A blank Update Set form opens.
4	Fill in the form fields (see the table below).	Give the update set a meaningful name and set its state and application.	Form is ready to save.
5	Click **Save**.	Saves the record so the update set actually exists in the system.	Update set record is created.
6	Under Related Links, click **Make This My Current Set**.	Tells ServiceNow to record all your future changes into this update set.	The update set is now your current set.
7	Verify the current update set.	Check the update set picker or the list to confirm.	Project Update Set appears as Current.

Form Field Values

Field	Value	Explanation
Name	Project Update Set	Identifies the update set. Use a clear, project-related name.

Field	Value	Explanation
State	In progress	Means the set is open and still collecting changes. Complete it only when development is finished.
Application	Global	Scope of the changes. Global means the changes are not limited to a specific scoped application.

Key Points to Remember

Point	Why it matters
Save before using Related Links	Make This My Current Set appears only after the record is saved.
Keep State as In progress	Only in-progress sets can capture new changes.
Always confirm the current set	If another set is current, your changes will be saved in the wrong set.
